DilliC

From the strategy you set to the change you ship, in one place.

DilliC is planning and change management for organisations that need to see whether their work moves the objectives they care about.

Most organisations plan in one place and deliver in another. Strategy lives in slide decks and spreadsheets. The work lives in Jira, a service desk, and a dozen team boards. Between the two sits a gap nobody owns. Leaders cannot tell whether this quarter's work moves the goals they set, and teams cannot tell why their work matters.

DilliC closes that gap. It models the organisation as it is, from company to division to team, weighted by what each part contributes. Each part sets its objectives, assesses where it stands today, traces its problems to their root causes, and compares the options for fixing them. The initiatives that come out of that planning flow straight into delivery: Scrum and Kanban boards, sprints, risks and dependencies, ITIL change enablement, portfolio funding, and SAFe for those who run it. Every figure rolls up the hierarchy, and built-in AI analysis reads the same numbers leaders do. And the loop closes: the plan, the delivery, and the service desk name the same services, so a measure reads itself from the desk, an initiative is checked against what its releases touched, and a root cause cites the incidents behind it.

It joins an enterprise rather than asking it to start over. Single sign-on and directory provisioning come standard. Sync with fifty-three trackers, Jira and GitHub Issues among them and forty-eight in both directions, lets teams keep their tools and gives leadership one picture. Customers and partners can answer surveys without a seat, and the whole product runs on the web, iPhone, and Android.

Free for 10

A starter plan with no sales call. During the beta every plan is free.

From $7 / user / month

The launch price, kept by every organisation that subscribes at it. From $12 afterwards.

53 trackers, synced

Jira, GitHub Issues, and more, 48 both ways. Teams keep their tools.
